Home SDG SCHOOL

-- become an agent of change --

The goal of the Home SDG School is to introduce to scholars skills to tackle challenges proposed by the sustainable development goals (SDG) defined by United Nations. Namely, Home mentors train future agents of change with frugal technologies and digital tools. These skills are developed through an emphasis on project-based activities, collaboration, and interdisciplinarity.

During an intense week programme, you will have the opportunity to learn by doing:

- **Human-centered design and social engineering**
- **Data analysis, electronics and arduino-board technology**
- **Human-centered web development, documentation tools, and communication strategies**
- **Entrepreneurship, education and game design**
- **Team-building, soft-skills development and collaboration**

Selected participants will have access to close mentoring sessions, technologies, space and resources to design and carry-out projects within the scope of the SDGs.

We welcome applicants from all academic and non-academic backgrounds who are curious, eager and motivated to learn new skills and work at the intersection between education and technology.

We look forward to your involvement and dedication to reaching the UNESCO 2030 Challenge!
